

Brass button for Army officer or NCO shoulder boards, 1943 through late 1940s.

Brass obverse with steel back and loop.

Very good condition. The reverses all exhibit storage rust to some degree. In some cases, there are also very minor flecks of corrosion or places with tiny rust stains on the brass obverses. A good polishing with Brasso or Simichrome will remove any rust from the backs (or the edges) and render the brass obverses bright as new.

These differ from later buttons by the absence of a date stamp on the back - the year of manufacture appeared on the reverses of all Soviet Army buttons from the late 40s on.

Price is per individual button.
