

NAZ-7 Mig Survival Kit, dated 1991.

Contained in parachute type bag, a sectionalized backpack of extensive survival gear.

Backpack consists of two parts, one part contains two metal water containers, includes desalination kit. The other part is a sectionalized "tray" of survival equipment. Appears to be mostly complete but some of the small metal boxes are empty, no ammunition. Survival radio and battery are replaced with plastic box (an example currently available separately at this time in our catalog). Includes a manual which is sealed into a watertight plastic bag.

Condition is excellent, very clean with minor storage age. Note, this item is heavy, special shipping may apply. See Wise "Mig Pilot Survival" pp 6 - 18
